(54) Title: METHOD AND TERMINAL FOR GENERATING UNIFORM DEVICE-INDEPENDENT GRAPHICAL USER INTERFACES

(57) Abstract: The invention relates to a method for generating a user interface of a network node. An application is structured into a core application part responsible to handle data objects and a viewer/controller application part responsible to display said data and to initiate actions on said data, wherein said viewer/controller application part is formed by said user interface. A screen mask creating module (240) retrieves screen mask configuration data (320) and widget configuration data (310). A widget creating module (230) generates at least one user interface component

(10 - 18; 410) on the basis of one or more component pattern (411, 412). A screen mask of said user interface is generated by said screen mask creating module (240), wherein said screen mask comprises at least one component which is a component out of said components comprised by the widget configuration data. Said at least one component is assigned to at least one data object and/or dynamic behaviour of said components assigned to said screen mask based up a user action on a user interface component and/or a data object.
